### Elastic Adhesive Bandage

Ref	Description	Quantity
12093W	Elastic Adhesive Bandage 5cm x 4m	Single
12094W	Elastic Adhesive Bandage 7.5cm x 4m	Single

Easy unwind for controlled application

- Zinc Oxide Adhesive
- May be applied directly to the skin
- Conforms to body/limb contours
- 4.5m Stretched

Specifically designed for joint support and particularly recommended for knees and ankles. Steroplast E.A.B may be used to provide short-term support to weak joints or long term rehabilitation following injury. It is therefore ideally suited for Sports and Occupational injuries.

The porous adhesive coating used on Steroplast E.A.B allows the bandage to be unwound easily for increased tension control during application.

The bandage may be applied directly to the skin as the adhesive coating weight and characteristics allow removal with the minimum amount of discomfort. Alternatively Sterogauz may be used as a protective uncovering. The degree of support provided by Steroplast E.A.B may be varied during application to suit differing conditions. This versatility makes Steroplast E.A.B a useful general purpose bandage for use in such conditions as Varicose Ulcers, Varicose Veins and support following removal of Plaster of Paris.
